

Student Voices : In Canva, we learned how to make our videos more creative by adding music and even recording our own sound. We explored how to upload audio, adjust volume, and place it correctly in the timeline. We also learned basic video editing skills like trimming clips, adding transitions, and arranging scenes. This gave us confidence to express our ideas in a fun and professional way.

Project Report and Skill Development

Project Goals: The goal of this project is to help students create meaningful and engaging videos using Canva. Students will learn how to add music, record their own sound, edit video clips, and use creative tools to share their ideas clearly.

Process/ Steps: Add Students first selected a video template in Canva and added their pictures or clips. Then they learned how to add music, upload their own voice recording, and adjust the audio in the timeline. After that, they edited the video by trimming scenes, adding text, and using transitions.

Skills Learned : Students learned important digital skills such as adding music, recording their own sound, and editing video clips in Canva. They also developed creativity, confidence, and communication skills by designing and presenting their ideas

Challenges and solutions :

Some students had trouble matching the sound with the video and recording clear audio. To solve this, we practiced slowly, took teacher help, and worked together. After practicing a few times, students understood the steps and completed their videos easily.
