CODE WARRIORS

Student Voices :

Through coding ,design and research, we have learnt to think critically and work collaboratively. We enjoyed using blocks, designing character and making animations. The platform enabled us to design, code, and refine our ideas with confidence. I used to think coding was too hard, but now i feel like i can keep improving and try more challenging projects.

Project Report and Skill Development

Code Warriors

Inderpreet Kaur 10/11/2025

Meet the Team :

Project Goals:
The goal of this Scratch project is to help learners understand the basics of programming using simple, visual coding blocks.

Process/ Steps:
Scratch coding blocks help learners build logical thinking and problem-solving abilities.
They learn to break big tasks into small, manageable steps using block-based commands.

Skills Learned :
Using Scratch coding blocks helps learners develop strong logical thinking and problem-solving skills.
It teaches them how to break tasks into smaller steps and build interactive stories or games.

Challenges and Solutions :

Challenge:- Getting familiar with the new application was initially confusing. Solution:- Regular practice sessions and demonstrations helped everyone to gain confidence and develop practical skills.
