

Club project spotlights :

Students learnt CSS styling techniques to design attractive and responsive web pages. They explored layouts, colors, Flexbox, Grid, and simple effects to improve the appearance and usability of websites.

Student Voices :

Students shared: "Learning CSS was fun and creative. We enjoyed designing web pages with colors, layouts, and effects. The activities helped us improve our front-end skills and made website designing easier to understand"

Project Report and Skill Development

WebWeavers Club

Jiya budhiraja - 9/5/2026

Project Goals : To learn the basics of CSS and improve webpage design skills. To create attractive, responsive, and user-friendly web pages using layouts, colors, and styling techniques. Make the site look good on both a phone and a computer.

Process/ Steps : They gained technical proficiency in basic CSS properties, specifically manipulating colors, typography, and element positioning. Students learned how to plan a design and use basic code to change colors and text.

Skills Learned : Organizing data using rows and columns. Using table headers for clarity. Styling tables with CSS.

Challenges and solutions :

The main challenge was slow page performance due to large image files. This was solved by resizing the pictures to be smaller, significantly increasing the loading speed.

Room no.	Room type	Price	Room detail
101-199	Luxary	5000 per day	Available
200-299	Single bedroom	1000 per day	Available
300-350	Family room	2500 per day	Not available
351-400	Double bedroom	3000 per day	Available
